

Realtime Tracking System(RTLS) ระบบติดตามพิกัด

By

PrezON Technology Co., Ltd. Pahol.pruk@prezon.me

blueiot

3 ระบบติดตามพิกัด

Feature	BLE AoA	UWB	BLE Beacons (RSSI)
Accuracy	<50 Cm.	< 30 CM.	2-5 M.
Cost	ปานกลาง	กลางถึงสูง	ត្លុក
Power Cons.	ต่ำ	กลาง	ต่ำมากๆ
Range (Optimal)	10-30m.	20-50m.	10-30m.
สภาพแวดล้อมที่ยาก	กลาง	ดีมาก	กลาง-ต่ำ
Latency	กลาง(วินาที)	เร็วมาก(มิลลิวินาที)	กลาง(วินาที)
ความยากในการติดตั้ง	กลาง	ยาก	ง่าย
Compatibility	ดีมาก BLE 5.0+	น้อย	ทุกชนิดของ BLE
Best Use Cases	Asset Tracking, Moderate Precision	Automation, Robotics, High Values Asset, Secure Access Control	Proximity, Simple Tracking, Zone Tracking

RTLS - Real-time Tracking System ระบบติดตามแบบตรงตามเวลาจริง ด้วย Bluetooth AoA ความแม่นยำสูง

RTLS แบบ AoA คืออะไร คือการหาพิกัดด้วยเทคโนโลยี องศาของสัญญาณที่มาถึง(Angle of Arrival)

ใช้ในการติดตามพิกัด บุคคลและสิ่งของต่างๆ แบบ realtime และมีประวัติย้อนหลัง

000000000

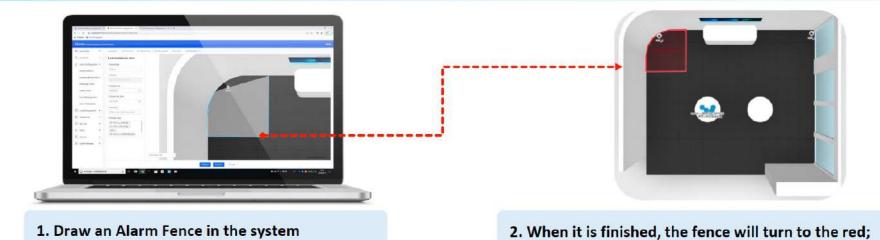

Typical accuracy: 0.1 ~ 0.5m

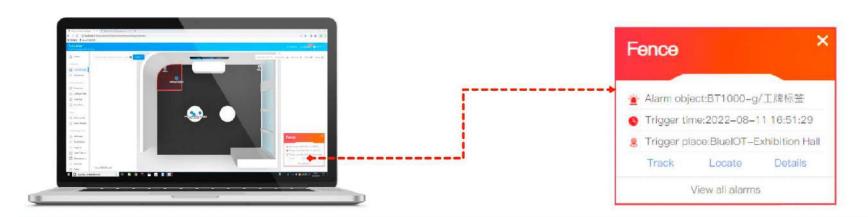

ความแม่นย้ำ 0.1-0.5 เมตร

- Locating with one anchor and two angles
- Accuracy level down to 10cm
- Support Bluetooth 5.1
- Compatible with BLE 4.0 tags or above
- Compatible with mobile phones

Function 1: Geo Fence

blueiot

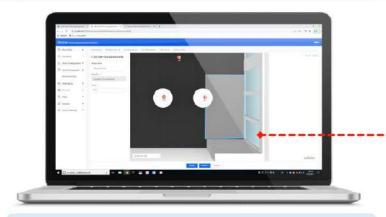

3. When the tag touches the geo fence, an alarm will be triggered on both the application software and the tag.

Function 2: Regional Statistic

blueiot

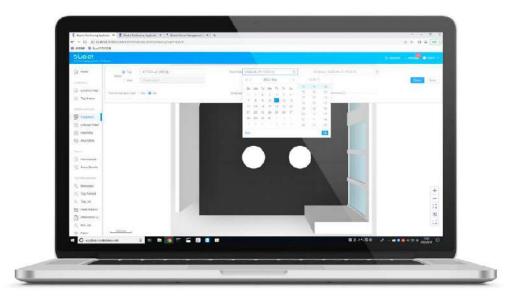

1. Draw a statistic region in the system

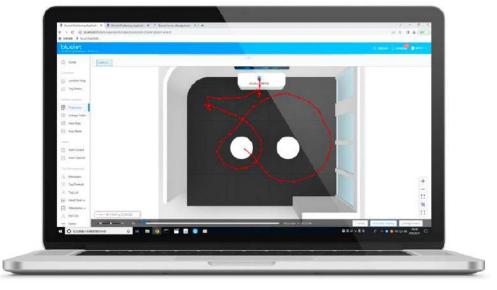

2. When it is finished, the fence will turn to the blue;

3. The tag information including entry time, departure time, and staying duration will be recorded.

Function 3: Trajectory

1. You can query positioning information of any tag in the system after setting the start time and end time.

2. You can play the trajectory through a play bar or see the full trajectory by clicking the "full track display" button.

000000000

Function 4: Cameras Linkage

blueiot

- Support video linkage with security cameras, quickly lock the video surveillance screen of a particular tag.
- Track designated personnel simultaneously with multiple objects.
- Support the world's five major security surveillance cameras including Dahua, HIKVISION, Tiandy, Uniview, and Kedacom.

RTLS Industry 4.0 Solutions to Upgrade Your Manufacturing Processes

A manufacturing workplace involves innumerable people, vehicles and other types of assets. Blueiot RTLS Manufacturing solutions using BLE AoA technology satisfy the need for creating a safe, orderly and productive working environment and accelerate the integration of industry and information.

Guarantee safety

Zonal management

- A workplace is invisibly divided into different zones by electronic fence.
- Alarm will be sent when people or vehicles are approaching a dangerous or banned area.

Immediate rescue

Epidemic prevention

blueiot

Maintain order

Make an inventory

- Assets including vehicles, equipment and materials can all be matched with corresponding tags.
- Data about where they are and how many there are will be collected and analyzed.

Personnel management

Real-time tracking

Boost efficiency

Accurate location

- A mobile equipment is convenient to use, but looking for one is time-consuming.
- Only when a machine is located and found fast enough can they be put into use fast enough.
- Calling for and allocating a right person to the right position also matters in improving productivity.

Automatic inspection

Attendance checking

Logistic Solution

blueiot

Indoor Position Tracking to Improve Efficiency in Logistics

In logistics, RTLS tracker can be used to optimize the movement and utilization of assets such as vehicles, containers, and inventory. Blueiot provides high-precision indoor positioning solutions based on Bluetooth AoA technology, for retail & logistic industry to be organized and efficient at minimum cost.

People management

Attendance checking

Ensuring safety

Real-time surveillance

• Fast to know where a worker is and where he/she went in case of loaf on the job.

• Data helps to analyze who is liable in case problems occur.

Logistic Solutions

blueiot

Vehicles and mobile equipment

Minimize the search time

- Locate the vehicle immediately and lead you to the location as soon as possible.
- Provide guidance and navigation services for AGV to keep in right direction.

Reduce accidents

Visualized supervision

Goods and materials

It is clear to see where goods and materials are placed and whether they are misplaced. Make an inventory Automatic inspection

Safety & Security

BLE Indoor Positioning Empowers Public Security Sector

Blueiot solutions apply high-precision BLE indoor positioning technology to law enforcement agencies to keep staff and detainees safe, and to modernize and standardize law enforcement process.

Healthcare

Maximize patient & staff safety with RTLS tracking

Museum

Efficient museum management with RTLS tracking

Manufacturing

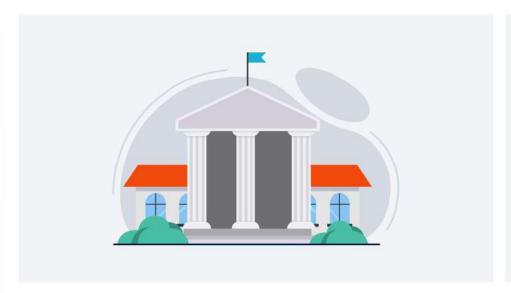

Transform your production line with Blueiot RTLS

Entertainment

Experience the ultimate entertainment with RTLS solutions

Safety and security

Empower your security management with RTLS technology

Sports and events

Maximize performance, enhance safety with RTLS solutions

Logistics

Revolutionize your logistics operations with Bluetooth RTLS

Parking space

Streamline your parking process with Blueiot RTLS

Transportation

Real-time insights for optimized transportation with RTLS

Use Case

blueiot

Employee & Visitor Tracking

Asset Tracking

System Integration

Applications | System Integration

RTLS

A high-precision locating system can be applied to various warehouse scenarios alone.

RTLS+MES

Blueiot RTLS can be integrated with the manufacturing execution system for tracking people and equipment in real time.

RTLS+OMS

Blueiot RTLS linked with the order management system can dramatically improve logistics productivity.

staff performance & tracking

blueiot

Automatic Clock-in/out

Employees wearing a tag (badge or wristband) can clock in or out automatically.

Inspection Management

The system can assign inspection tasks, inform staff in time, and check punctuality or duration.

staff locating & tracking

blueiot

Accurate Locating

The real-time locating of employees allows companies to check or find where they are at any time.

Trajectory Analysis

The movement of employees can be recorded for necessary analysis in case of accidents.

🗸 การนำมาใช้ประโยชน์ เช่น นับเที่ยว นับระยะ เป็นรายบุคคล

blueiot

Bluetooth Asset Tracking

Materials, vehicles and equipment are all valuable possessions of an enterprise. RTLS indoor asset tracking solutions enable enterprises to optimize their asset management, thereby helping to reduce costs and increase productivity.

การติดตาม รถ พาเลท ทรัพย์สิน

blueiot

Trajectory Analysis

How assets are used is visualized when their location or movement can be recorded for a playback.

Inventory Checks

Entry or exit of assets will be sensed and recorded, and the real-time change in number can be displayed.

✓ Realtime Inventory, Asset Movement Analysis เพื่อเพิ่มประสิทธิภาพการจัดวาง

blueiot

Accurate Locating

Save time in finding a specific item, even from piles of different materials or equipment.

Panoramic Map

Camera linkage in the location system provides a full view to supervise a company's daily operation.

เปิดกล้องอัตโนมัติตาม Asset / Staff

blueiot

Regional Management

Misplaced material, vehicle or equipment will be detected and trigger alerting.

Inspection Management

The system can assign inspection tasks in time, and check their arrival, frequency and duration at the spot.

🗸 การจัดการพื้นที่ ของอยู่ผิดที่, รปภ. ต้องเดินตามจุด ตามการกำหนด

Indoor Navigation

blueiot

Optimal Route

For new comers, it is convenient to follow the recommended route with audio narration.

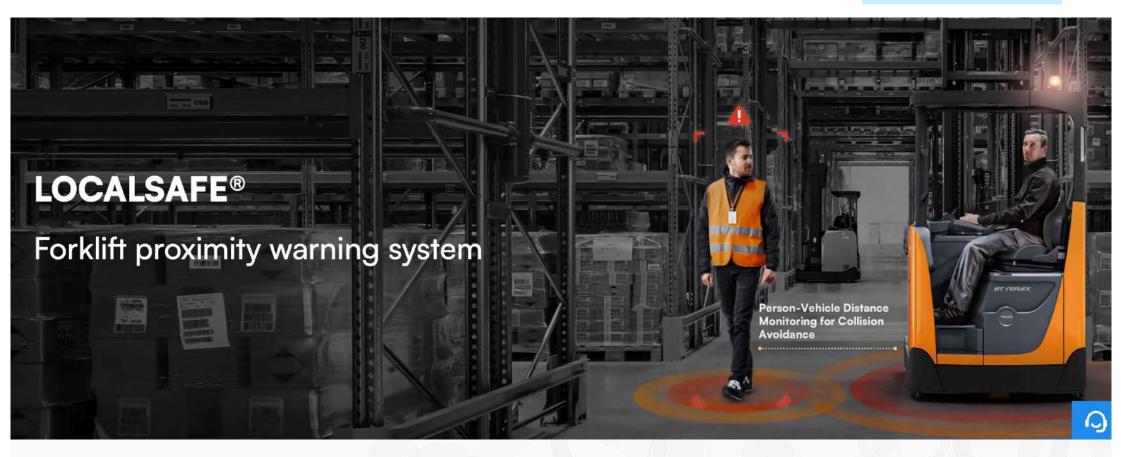

Trajectory Analysis

Operators adjust strategies or upgrade services accordingly by telling the popularity of different places.

- 🗸 สำหรับพนักงานใหม่ การบอกเส้นทางที่ดีที่สุดให้ ก็จะทำให้ประสิทธิภาพดีขึ้น
- 🗸 การวิเคราห์เส้นทางการเดินวิ่งของคนและรถให้ได้ประสิทธิภาพสูงขึ้น

blueiot

Use Case

blueiot

Smart Warehouse in Turkey

- Blueiot partner has brought the smart warehouse solution to Turkey.
 One of their projects involves 6 local factories with a total area of 150,000 square meters. There were 60,000 boxes in the warehouse (20,000 boxes in the work area and 40,000 boxes in the warehouse area) that needed precise monitoring.
- After the deployment of the Blueiot high-precision positioning system,
 the staff can see the real-time location and historical track of each
 box on the location map when it is transferred from the work area to
 the warehouse area, helping the company make an inventory
 accurately, save manpower, and improve the management efficiency
 of goods and vehicles.

Use Case blueiot

Fall-Prevention Equipment Manufacturing Giant

Shanghai Research Institute of Building Sciences Co., Ltd (SRIBS) is one of the first companies to be titled with "Shanghai Brand" and one of the largest manufacturers of fall prevention equipment for construction hoists, accounting for 40% market share. Blueiot system not only helped save labor, which is, 50% time spent in object finding and route optimization for workers, but also increased the production capacity by 65% and productivity by 40%, along with a 30% decrease of production cycle time and 50% reduction of floor space.

Use Case

blueiot

World-Leading Material Handling Equipment Manufacturer

- HANGCHA Group is one of the leading material handling equipment
 manufacturers globally. Ranking 8th in the world in terms of sales volume
 according to MMH (Modern Material Handling) magazine, it accounts for
 more than 8% sales volume in the world in terms of industrial vehicles.
- Blueiot high-precision positioning system shortened the average search time for a vehicle to merely 1 minute, nearly a 90% increase! Besides, the battery life of a tag reaches up to 5 years and the daily cost is only \$0.016.

Use Case

blueiot

Digitalization of International Air Logistics

- China Southern Air Logistics operates more than 860 passenger and cargo aircrafts, ranking 1st in Asia and 3rd in the world. So far, it has opened 19 air cargo routes to provide international transportation services.

 Blueiot solution was adopted in December 2021 and more than 600 AoA anchors and over 3000 AoA tags were deployed at the airport of 140,000 square meters. The positioning accuracy of indoor scenes reached less than
 - 1 meter and the outdoor accuracy is also controlled within 3 meters.
- With this high-precision positioning system, functions like real-time location, status tracking, and process monitoring of containers were all provided, and a customized container information management solution enabled the visual management of container distribution and statistics (thermal power, aggregation, layering).
